

## MAP ASSIGNMENT 2: Climate Change

Create a **thematic map** illustrating **two consequences** of global climate change. Consequences can be economic, physical, biological, etc. Example: Rising sea levels could be illustrated by showing the areas that will be affected based on predicted rises. You could color those areas of the map in red and explain that in a *map key* at the bottom of the map (do not use that one for the assignment). Please **cite map sources** used (hyperlinks are fine). This is due by midnight (11:55pm) on **Monday, 9/16**, and will form the basis of a class activity on Tuesday, 9/17.
